EXPLORING THE NUMBER JUNGLE: A JOURNEY INTO DIOPHANTINE ANALYSIS

EDWARD B. BURGER

Table of contents

<i>Opening thoughts:</i> Welcome to the jungle	1
Modules	
1. A bit of foreshadowing and some rational rationale	7
2. Building the rationals via Farey Sequences	11
3. Discoveries of Dirichlet and Hurwitz	17
4. The theory of continued fractions	23
5. Enforcing the law of best approximates	29
6. Markoff's spectrum and numbers	35
7. Badly approximable numbers and quadratics	43
8. Solving the alleged “Pell” equation	49
9. Liouville’s work on numbers algebraic and not	55
10. Roth’s stunning result and its consequences	61
11. Pythagorean triples through diophantine geometry	67
12. A quick tour through elliptic curves	75
13. The geometry of numbers	81
14. Simultaneous diophantine approximation	89
15. Using geometry to sum some squares	95
16. Spinning around irrationally and uniformly	99

Table of Contents

17. A whole new world of p -adic numbers	105
18. A glimpse into p -adic analysis	113
19. A new twist on Newton's method	117
20. The power of acting locally while thinking globally	123
Appendices	
1. Selected Big Picture Question commentaries	129
2. Hints and remarks	135
3. Further reading	145
Acknowledgments	147
Index	149
